

Developer Assessment

AI Chief of Staff

OVERVIEW

A CEO receives 20+ communications every morning across email, Slack, and WhatsApp. They need an AI system that processes everything, filters the noise, delegates what can be delegated, and surfaces only the decisions that require their attention.

Your task is to build this system.

DATA

messages.json — 20 incoming communications from a single morning.

DELIVERABLES

A working system with a web UI that produces:

Triage

Every message classified as:

- **Ignore** — no CEO involvement needed
- **Delegate** — assign to the right person with a drafted handoff
- **Decide** — the CEO must act personally

For each: which category and why, and a drafted response.

Flags

Anything the CEO should know about.

Daily Briefing

One page the CEO reads in under 2 minutes.

TECHNICAL REQUIREMENTS

- LLM API (Claude, OpenAI, or equivalent)
- Web UI
- Code on GitHub with a README

Use of AI dev tools (Claude Code, Cursor, etc.) is encouraged.

TIME

Approximately 60 minutes. Quality of thinking matters more than completeness.

WHAT HAPPENS NEXT

- Submit your GitHub repo link
- We review your submission
- If strong: 15-min live interview
- You demo the system and we test it with new data

SUBMISSION

Reply to the email sent by **rayyan@innateaconsulting.com** with your GitHub repository link.

CONTEXT

This is based on a real client project. Strong submissions will directly inform our production build. Top performers will be first in line when the project kicks off.
